Eduardo Kegler

Senior Frontend Engineer

Location: Florianópolis, Santa Catarina, Brazil
Email: eduardokegler1@gmail.com
LinkedIn: linkedin.com/in/eduardokegler | GitHub: github.com/EduKegler | Portfolio: kegler.dev

PROFESSIONAL SUMMARY

Senior Frontend Engineer (8 years) specializing in authentication/onboarding and real-time trading interfaces. At Coinbase, raised sign-up conversion by 35% and cut auth flow load time by 20%. At Liquid Labs, was the sole frontend engineer on a wallet-connected DeFi trading app (AMM, CLOB, perps) that reached a public testnet with over 1 million users.

WORK EXPERIENCE

NG.cash (Brazilian fintech)

Senior Software Engineer
05/2026 - Present | Remote
Stack: React Native, TypeScript, React, Next.js, Feature Flags, PostHog, Datadog, AWS Lambda, AWS CDK, GitLab CI

- Delivered the new home navigation in React Native end to end, nearly solo: RFC, design-system component, grid engine, skeleton loading, A/B experiment, feature flags and observability. Rolled it out to 100% of adult users.
- Ported a full web e-commerce product to the mobile app, covering purchase flow, logged-in area, OTP login with auth guard, signup, and identity verification.
- Traced 3 of the top login errors to one bug in credential storage after password reset and shipped the fix. Found the cause of a biometric autologin failure by reading react-native-keychain internals.
- Cut AWS Lambda provisioned concurrency from 151 to 22 instances after finding paid capacity no service used, with a CDK rollout that kept a fallback in place.
- Removed ~40% of an onboarding web app's codebase and upgraded all dependencies, clearing open CVEs.

Liquid Labs (GTE / gte.xyz)

Senior Frontend Engineer (Contract)
03/2025 - 02/2026 | Remote
Stack: React, TypeScript, Next.js, Zustand, TanStack Query, Storybook, React Hook Form, Zod, Viem, Privy, Vitest, WebSockets, Amplitude, Monorepo, pnpm

- As the sole frontend engineer, built 5 trading products (AMM, CLOB, perpetuals, token launchpad and portfolio tracking) and took the frontend from zero to a public testnet with over 1 million users in under a year.
- Built and owned the internal design system, with 20+ Storybook components. Used Zustand for client state, TanStack Query for server cache, and React Hook Form with Zod for form validation.
- Implemented wallet connectivity and authentication with Privy and Viem: wallet login, session handling and transaction flows across the platform.
- Built real-time portfolio and trading UIs on WebSocket streams for balances, PnL, open positions and order execution, and improved large-dataset rendering and Core Web Vitals on the live trading screens.
- Used Codex and Claude Code for scaffolding, refactors and tests across the monorepo. Reviewed the production changes and kept frontend test coverage above 90% with Vitest and React Testing Library.

Coinbase

Software Engineer, Frontend

08/2021 - 03/2025 | San Francisco, CA, USA

Stack: React, TypeScript, GraphQL, OAuth/OIDC, Jest, Vite, Cypress, React Testing Library, Storybook, i18n, Feature Flags, Datadog, Amplitude, Turborepo, Monorepo

- Built accessible (WCAG), responsive, cross-browser sign-in flows used by 200,000 people a day, with OAuth for Apple, Google and Ethereum wallets.
- Shipped the App Switcher across Coinbase Help Center, Tracer and Commerce with i18n and Amplitude analytics. Cross-product engagement among retail web users rose 0.45%.
- Led Unified Signup 2.0, A/B testing Apple and Google sign-in and sign-up flows behind feature flags. Sign-up conversion rose 35%.
- Improved Core Web Vitals in the main authentication flows and cut their load time by 20% with rendering and caching changes.
- Reviewed code and wrote RFCs across a Turborepo monorepo, and interviewed frontend engineering candidates.

Tech6

Software Engineer

06/2019 - 08/2021 | Brazil

Stack: React, TypeScript, GraphQL, JavaScript, Storybook

- Developed and maintained a real estate platform in React, TypeScript and GraphQL, used by 3,000 people.
- Designed and built an internal design system shared by 3 platforms, responsive and cross-browser. Also worked on the redesign of the main website.
- Implemented an automated invoice generation system for transaction participants, replacing a manual process for every transaction.

Todobit | Junior Software Engineer | 12/2018 - 06/2019 | Brazil

UFSC Telemedicine Lab | Software Engineering Intern | 08/2018 - 12/2018 | Brazil

SKILLS

Frontend: React, React Native, TypeScript, Next.js, JavaScript, Tailwind CSS, Redux, Zustand, TanStack Query, React Hook Form, Zod, Storybook, Vite, Webpack, HTML, CSS

API/Backend: GraphQL, Node.js, REST APIs, WebSockets

Auth/Identity: OAuth, OIDC, Wallet Connectivity

Architecture: Design Systems, Accessibility (WCAG), SSR/SSG, Caching Strategies, Internationalization (i18n), Feature Flags, RFC Authoring

Quality & Observability: Jest, Vitest, Cypress, React Testing Library, Core Web Vitals, Datadog, Amplitude, PostHog

Delivery: CI/CD, GitHub Actions, GitLab CI, Vercel, Monorepo, Turborepo, pnpm

AI Tools: Claude Code, Codex, Prompt Engineering, MCP

Web3/Trading: Viem, Privy, Wagmi, DeFi, AMM, CLOB, Perpetuals, Real-time Data UIs

EDUCATION & LANGUAGES

Universidade do Vale do Itajaí | Bachelor's Degree in Computer Science | 2017 - 2021 | Brazil
Languages: Portuguese (Native), English (Advanced)
