PROFESSIONAL SUMMARY

Senior Product Engineer (8 years) specializing in real-time trading interfaces, API design, and data modeling. Shipped measurable outcomes at scale (+35% signup conversion, −20% auth flow load time at Coinbase) and led Web3 wallet-connected DeFi surfaces (AMM, CLOB, perps) with latency-sensitive UIs at Liquid Labs.

WORK EXPERIENCE

NG.cash (Brazilian fintech)

Senior Software Engineer
05/2026 - Present | Remote
Stack: React Native, TypeScript, React, Next.js, Feature Flags, PostHog, Datadog, AWS Lambda, AWS CDK, GitLab CI

- Delivered a new home navigation experience end to end in React Native, nearly solo, from RFC and design-system component to grid engine, skeleton loading, A/B experiment, feature flags, and observability, rolled out to 100% of adult users.
- Ported a full web e-commerce product to the mobile app, covering purchase flow, logged-in area, OTP login with auth guard, signup, and identity verification.
- Traced 3 of the top login errors to a single root cause in credential storage after password reset and shipped the fix; root-caused a biometric autologin failure by reading react-native-keychain internals.
- Cut AWS Lambda provisioned concurrency from 151 to 22 instances after finding paid capacity no service used, with a CDK rollout that kept a fallback in place.
- Removed ~40% of an onboarding web app's codebase and upgraded all dependencies, clearing open CVEs.

Liquid Labs (GTE / gte.xyz)

Senior Frontend Engineer (Contract)
03/2025 - 02/2026 | Remote
Stack: React, TypeScript, Next.js, Zustand, TanStack Query, Storybook, React Hook Form, Zod, Viem, Privy, Vitest, WebSockets, REST, Amplitude, Monorepo, pnpm

- As the sole frontend engineer, built 5 core trading surfaces (AMM, CLOB, perpetuals, token launchpad, and portfolio tracking), delivering the platform frontend from zero to a public testnet used by over 1 million users in under a year.
- Built and owned the internal design system with 20+ Storybook components, using Zustand for client state, TanStack Query for server cache, and React Hook Form + Zod for schema-validated forms.
- Implemented wallet connectivity and onchain state using Privy and Viem, supporting wallet login, session handling, multicall reads, and transaction flows from signing to settlement confirmation.
- Built real-time portfolio and trading UIs powered by WebSocket streams for balances, PnL, positions, and order execution, co-designing API contracts and data models with the backend team and defining normalization rules for high-frequency updates.
- Used Codex and Claude Code for scaffolding, refactors, and test coverage across the monorepo, with production changes reviewed and 90%+ frontend test coverage maintained via Vitest and React Testing Library.

Coinbase

Software Engineer, Frontend

08/2021 - 03/2025 | San Francisco, CA, USA

Stack: React, TypeScript, GraphQL, REST, OAuth/OIDC, Jest, Vite, Cypress, React Testing Library, Storybook, i18n, Feature Flags, Datadog, Amplitude, Turborepo, Monorepo

- Reduced auth friction for 200,000 daily users by implementing accessible (WCAG), responsive, cross-browser sign-in flows with OAuth for Apple, Google, and Ethereum Wallet.
- Shipped the App Switcher across Coinbase Help Center, Tracer, and Commerce with i18n and Amplitude analytics, increasing cross-product engagement among retail web users by 0.45%.
- Led Unified Signup 2.0, A/B-testing sign-in and sign-up flows for Apple and Google behind feature flags, resulting in a 35% increase in sign-up conversion rate.
- Optimized Core Web Vitals in key authentication flows, reducing load times by 20% through targeted rendering and caching improvements.
- Drove quality through code review and RFC authoring across a Turborepo monorepo, and contributed to hiring through frontend engineering interviews.

Tech6

Software Engineer

06/2019 - 08/2021 | Brazil

Stack: React, TypeScript, GraphQL, JavaScript, Storybook

- Improved performance and user experience for 3,000 users by developing and maintaining a real estate platform using TypeScript, React, and GraphQL.
- Achieved UI consistency across 3 platforms by designing and building an internal design system with responsive design and cross-browser support, and supporting a redesign of the main website.
- Implemented an automated invoice generation system for transaction participants, replacing a manual process for every transaction.

Todobit | Junior Software Engineer | 12/2018 - 06/2019 | Brazil

UFSC Telemedicine Lab | Software Engineering Intern | 08/2018 - 12/2018 | Brazil

SKILLS

Frontend: React, React Native, TypeScript, Next.js, JavaScript, Tailwind CSS, Zustand, TanStack Query, React Hook Form, Zod, Storybook, Vite, HTML, CSS

API/Backend: API Design, Data Modeling, REST APIs, GraphQL, WebSockets, Node.js

Auth/Identity: OAuth, OIDC, Wallet Connectivity

Architecture: Design Systems, Accessibility (WCAG), SSR/SSG, Caching Strategies, Internationalization (i18n), Feature Flags, RFC Authoring

Quality & Observability: Jest, Vitest, Cypress, React Testing Library, Core Web Vitals, Datadog, Amplitude, PostHog

Delivery: CI/CD, GitHub Actions, GitLab CI, Vercel, Monorepo, Turborepo, pnpm

AI Tools: Codex, Claude Code, LLM Integration

Web3/Trading: Viem, Privy, Wagmi, DeFi, AMM, CLOB, Perpetuals, Multicall, Transaction Flows, Real-time Data UIs

EDUCATION & LANGUAGES

Universidade do Vale do Itajaí | Bachelor's Degree in Computer Science | 2017 - 2021 | Brazil
Languages: Portuguese (Native), English (Advanced)
